

AM175 Articulating Display Mount

The AM175 is a slim, commercial grade scissor style articulating swing-out mount that has 12.8 inches of extension, 10 degrees of tilt and allows for lateral shifting. This means that you will be able to view your display at almost any angle you chose.

With unmatched movement versatility, the AM175 can also hold up to 175 lbs, which is more than the weight of most standard displays.

Among articulating mounts the AM175's price to value is amazing, especially when using larger format displays in professional applications.
